EDUCATION

Georgia Institute of Technology

M.S. in Computer Science; Cumulative GPA: 4.0

Jan. 2024 – Expected Dec. 2026

Atlanta, GA

University of South Carolina: Honors College

B.S. in Statistics and Economics; Summa cum laude, GPA: 4.0

Aug. 2018 – Aug. 2022

Columbia, SC

University Carlos III of Madrid

Study Abroad Program

Sep. 2021 – Jun. 2022

Madrid, Spain

PROFILE

M.S. candidate in Computer Science with a B.S. in Statistics and Economics. Experience spanning machine learning, data analysis, empirical research, and LLM application development, with a strong Python and R foundation.

TECHNICAL SKILLS

Programming: Python, R, SQL; familiar with Java, Stata, SAS

Machine Learning & Data: PyTorch, scikit-learn, TensorFlow, Hugging Face Transformers, pandas, NumPy, tidyverse; supervised and unsupervised learning, reinforcement learning, NLP, causal inference

Development & Visualization: Git, Linux, Bash, Docker, FastAPI, Jupyter, Colab, Streamlit, Quarto, GitHub Actions, $\LaTeX$

RESEARCH & PROFESSIONAL EXPERIENCE

Data Analyst Intern

GreyNoise Intelligence; Finance and Operations Team

Jun. 2023 – Sep. 2023

Washington, DC

- Automated data-quality checks, NAICS industry classification, and transaction reporting workflows in Excel
- Developed Excel models to streamline contract-change calculations and forecast monthly investment returns from financial-institution data
- Analyzed customer churn and lead conversion in R, identifying key drivers of retention and conversion
- Built a Streamlit dashboard to communicate churn and conversion drivers and guide retention strategy

Undergraduate Research Assistant

Darla Moore School of Business; Division of Research

May 2021 – Oct. 2021

Columbia, SC

- Reviewed literature on spatial segregation metrics and neighborhood effects in Charleston, SC
- Cleaned and analyzed MSA-level economic, social, and demographic data to study STEM worker agglomeration
- Calculated location quotients and ran regressions in Stata/R to identify drivers of STEM clustering across MSAs

Undergraduate Research Assistant

University of South Carolina; Department of Economics

Jan. 2020 – Jan. 2021

Columbia, SC

- Digitized and organized CDC vital statistics data to support analysis of racial disparities in birth outcomes post-hospital desegregation

SELECTED TECHNICAL & RESEARCH PROJECTS

Local LLM Messaging Assistant | *Python, Ollama, signal-cli, Docker*

Jan. 2026

- Built a self-hosted Signal assistant with configurable personas, isolated per-chat memory, automatic summarization, web search, and administrative controls
- Supported concurrent conversations while preserving message order and context within each chat; redacted message text from logs and purged runtime data on shutdown

Graduate Machine Learning Studies | *Python, PyTorch, scikit-learn*

Sep. 2025 – Nov. 2025

- Completed four projects spanning supervised and unsupervised learning, randomized optimization, and reinforcement learning on datasets containing up to 7.7 million records
- Compared algorithms through hyperparameter searches, repeated trials, statistical tests, learning curves, and runtime analysis

- Authored technical reports on model performance, computational tradeoffs, limitations, and practical implications

Hospital Readmission Replication and Extension | *Python, PyTorch* Mar. 2025 – Apr. 2025

- Reimplemented the published CONTENT neural architecture and GRU benchmark for hospital readmission prediction
- Audited LLM-assisted data processing and implementation against the paper and original code, documenting incomplete and incorrect outputs
- Conducted thirty-trial experiments showing no significant improvement under the original setup; after systematic tuning, CONTENT significantly outperformed the baseline ($p < 0.0001$)

Multi-Model LLM Council | *Python, FastAPI, Ollama, Docker* Jan. 2026

- Built an OpenAI-compatible best-of-N proxy that generates parallel responses from configurable local-model pools and uses a separate LLM judge to select one

ML Trading Strategy and Market Simulator | *Python, pandas, NumPy* Jan. 2024 – May 2024

- Implemented a bagged random-tree strategy learner and market simulator to backtest risk-adjusted performance against a manual benchmark

Honors Thesis: The Effects of Chile's Neoliberal Reforms | *R, tidyverse* Aug. 2020 – May 2022

- Constructed a synthetic-control counterfactual from World Bank data to estimate the effect of Chile's reforms on GDP per capita
- Estimated 2019 GDP per capita to be 76% above the counterfactual; tested robustness across alternative donor pools, predictors, and a placebo study

HCI Study: Streamlined Camera Mode Selection in iOS | *Figma* Oct. 2024 – Nov. 2024

- Designed and tested an iOS interface using observations, surveys, heuristic analysis, and user testing; measured statistically significant improvements in efficiency and intuitiveness

SELECTED COURSEWORK

Computer Science: Machine Learning, Natural Language Processing, Big Data Analytics, Knowledge-Based AI, Algorithmic Design, Software Development Process, Human-Computer Interaction

Statistics & Economics: Applied Multivariate Statistics, Statistical Inference, Mathematical Statistics, Probability, Introductory Econometrics, Quantitative Microeconomics

AWARDS & HONORS

- **Stephen D. Durham Award:** Awarded to the top senior statistics student for exceptional academic performance (2022)
- **Phi Beta Kappa (2022) | Palmetto Fellows Scholarship (2018–2022) | Presidential Scholars Award (2018–2022)**
